ABOUT ME

Software developer with 15 years of professional experience.

Having worked on a wide array of project types and sizes, I have accumulated extensive experience and knowledge in many problem domains, which are valuable resources for any project I'm involved with.

Working solo and as a part of various-sized teams enabled me to be involved in all stages of a project life-cycle, from initial client contact and converting project drafts into detailed specifications, through development and deployment, to end-user training and customer support.

I'm constantly learning, upgrading my knowledge and following the latest trends in technology, without limiting myself to a fixed set of languages, frameworks or technology.
